

Preview Verification Report

Build Information

Date: December 26, 2025
Project: MorphoScan Pro
Version: 0.9.0-beta.1

Build Summary

Production Build

- **Build Time:** 43.36s
- **Total Chunks:** 122
- **Total Size:** 6,171.29 KiB
- **Status:**  Successful

Key Metrics

- **Main Bundle:** 127.80 kB (94% reduction from original 2.16 MB)
- **Vendor Chunks:** Properly split across 8 major bundles
- **PWA:** Service worker generated successfully
- **Code Splitting:** Implemented for heavy libraries

Bundle Breakdown

Chunk Name	Size	Purpose
Index-DwNsWvkV.js	127.80 kB	Main application code
ScannerSection-wEGFNlaq.js	148.98 kB	Scanner features
api-vendor-BYWXBERO.js	168.23 kB	Supabase + React Query
ui-vendor-CuZpilHp.js	178.28 kB	Radix UI components
index-Cv1BjyLu.js	232.49 kB	Core routing + utilities
recharts-vendor-BlodVVcV.js	259.50 kB	Charting library
react-vendor-DakChQKJ.js	288.43 kB	React core
pdf-vendor-C4ys9b1O.js	540.63 kB	PDF generation
vendor-ydUOlufS.js	741.78 kB	Miscellaneous vendors
three-vendor-zhh5g_T6.js	778.81 kB	3D graphics
tensorflow-vendor-rtta-hOz.js	1,102.21 kB	Machine learning

Runtime Issues

Current Status: ⚠ Investigating

Issue: React context creation error in production build

Error Message: Uncaught TypeError: Cannot read properties of undefined (reading 'createContext')

Location: api-vendor-BYWXBERO.js

Impact: Application fails to load in production build

Possible Causes

1. React module resolution issue in production build
2. Supabase client initialization timing
3. Service worker interference with module loading
4. Build target compatibility (es2019)

Next Steps

1. Test with development server (npm run dev)
2. Check React import order in api-vendor bundle
3. Verify Supabase client configuration
4. Consider disabling PWA for testing
5. Test with different build targets

Preview Server

- **Command:** npm run preview
- **Port:** 4173
- **URL:** http://localhost:4173
- **Status:** Server running ✓
- **Application Load:** ⚠ Error (see above)

Environment Configuration

Active Environment Variables

- VITE_SUPABASE_URL : ✓ Configured
- VITE_SUPABASE_PUBLISHABLE_KEY : ✓ Configured
- VITE_SUPABASE_PROJECT_ID : ✓ Configured
- VITE_APP_ENV : development
- VITE_APP_VERSION : sfw

Test Pages (Pending)

Once runtime issue is resolved, the following pages need verification:

- [] Home Page (/)
- [] DLC Store (/dlc)
- [] NSFW Dashboard (/nsfw-dashboard)
- [] Scanner Section
- [] Health Diary

- [] Settings Panel
- [] Profile Section

Recommendations

1. **Immediate:** Fix React module loading issue
2. **Testing:** Implement integration tests for production builds
3. **Monitoring:** Add error boundaries to catch runtime errors
4. **Build:** Consider splitting api-vendor further to isolate Supabase
5. **PWA:** Test with service worker disabled to rule out caching issues

Notes

- Build process is highly optimized with manual chunking
- Bundle size reduction of 94% achieved through code splitting
- All Phase 1-3 optimizations are in place
- TypeScript strict mode enabled with 0 errors
- ESLint passing with 0 warnings

Next Actions

1. Resolve React loading issue in production build
 2. Complete visual verification of all key pages
 3. Take screenshots for documentation
 4. Proceed with implementing 6 new DLC revenue features
 5. Create comprehensive integration tests
-

Report Generated: December 26, 2025 02:25 UTC

Build Command: `npm run build`

Preview Command: `npm run preview`
