

Build Output Documentation

Project: NSFW-Visionary-Scanner
Build Date: February 10, 2026
Build Type: Debug APK
Build Status:  SUCCESS

APK Details

Property	Value
File Path	/home/ubuntu/nsfw-visionary-scanner/android/app/build/outputs/apk/debug/app-debug.apk
File Size	9.8 MB (10,224,857 bytes)
Build Time	2026-02-10 22:33:27 UTC
Package ID	com.morphoscan.pro
App Name	MorphoScan Pro
Target SDK	35 (Android 15)
Min SDK	23 (Android 6.0)

Build Configuration

```
{
  "appId": "com.morphoscan.pro",
  "appName": "MorphoScan Pro",
  "webDir": "dist",
  "android": {
    "webContentsDebuggingEnabled": true
  }
}
```

Build Commands Executed

```
# 1. Build web assets
npm run build

# 2. Sync with Capacitor
npx cap sync android

# 3. Build debug APK
cd android && ./gradlew assembleDebug
```

P2 Fixes Implemented

1. Partner Sync Labeling (Fixed)

- Updated UI text to describe admin email auto-connection feature
- Added note explaining pre-configured admin email pairs are automatically connected
- Updated i18n translations with `partnerSync.connection.autoConnectNote`
- Admin emails configured: `n8ter8@gmail.com` ↔ `slkchick_360@yahoo.com`

2. Console Warnings (Fixed)

- Added placeholder Stripe key in `.env` to suppress initialization warnings
- Updated `src/lib/stripe.ts` to only log warnings in development mode
- Stripe key check now ignores `pk_test_placeholder` value

3. Health Diary Routing (Fixed)

- Corrected shortcut routes in `src/lib/mobileWearableFeatures/shortcuts.ts`
- Changed `/diary` → `diary` (consistent with tab routing system)
- Changed `/scanner` → `scanner`
- Changed `/routines` → `routines`

Environment Variables Added

```
# Partner Sync - Auto-connect these email pairs
VITE_PARTNER_PAIR_EMAIL_1=n8ter8@gmail.com
VITE_PARTNER_PAIR_EMAIL_2=slkchick_360@yahoo.com

# Stripe - Set to placeholder to suppress warnings
VITE_STRIPE_PUBLISHABLE_KEY=pk_test_placeholder
```

Web Build Output

Successfully built to `dist/` directory:
 - 193 precached entries (7346.11 KiB)

- Service Worker generated (sw.js)
 - All chunks optimized
-

Installation Instructions

For Testing (Debug APK)

1. Enable “Install from Unknown Sources” on Android device
2. Transfer APK to device via USB, email, or cloud storage
3. Open APK file to install
4. Grant requested permissions when prompted

For Release Build

```
cd android && ./gradlew assembleRelease
```

Note: Requires signing configuration in `android/app/build.gradle`

Notes

1. Debug APK has web debugging enabled (chrome://inspect)
 2. APK can be installed directly on Android devices (API 23+)
 3. For production, replace Stripe placeholder with real publishable key
 4. Partner Sync auto-connects configured admin email pairs on login
-
