

NSFW-Visionary-Scanner Web Test Report

Test Date: February 10, 2026
Application URL: http://localhost:8080
Tester: QA Automation Engineer
Environment: Development (Vite v7.2.6)

Executive Summary

The NSFW-Visionary-Scanner application was tested across 10 test cases covering authentication, NSFW navigation, positions gallery, partner sync, admin dashboard, achievement system, health features, dashboard customization, notification center, and general UI/UX.

Overall Status:  **MULTIPLE CRITICAL ISSUES FOUND**

Category	Status	Critical Issues
Authentication	 Partial	Session persistence issues
NSFW Navigation	 Partial	Routes require env config
Positions Gallery	 Blocked	Age verification fails
Partner Sync	 Partial	Premium-gated feature
Admin Dashboard	 Critical	No authentication required
Achievement System	 Failed	Infinite loading state
Health Features	 Partial	Broken routes
Dashboard Customization	 Pass	Themes work correctly
Notification Center	 Pass	Admin notifications work
General UI/UX	 Partial	Console warnings, broken routes

Critical Bugs (P0)

1. Admin Dashboard Accessible Without Authentication

Severity: CRITICAL
Route: /admin
Description: The Admin Dashboard is fully accessible without any authentication. Any user can

access admin features including:

- User Management
- DLC Package Management (9 packages, \$48,815.33 revenue data)
- License Management (342 licenses)
- Analytics
- Notifications
- Content Management
- Database Management (shows 644,624 records, 1.2 GB storage)
- System Settings
- Security Settings

Impact: Complete security breach - unauthorized users can view sensitive data, manage users, and modify system settings.

Recommendation: Implement authentication gate for all `/admin/*` routes. Verify admin role before rendering admin components.

2. Age Verification Flow Fails Silently

Severity: CRITICAL

Route: `/positions`

Description: The age verification modal appears correctly, but after completing all steps (selecting age, checking both consent checkboxes, clicking “Verify & Continue”), the verification does not persist. The page still shows “Age Verification Required” gate.

Steps to Reproduce:

1. Navigate to `/positions`
2. Click “Verify Age”
3. Select age (e.g., 25 years old)
4. Check “I confirm that I am at least 18 years of age...”
5. Check “I agree to the Terms of Service...”
6. Click “Verify & Continue”
7. **Result:** Page still shows age verification gate

Impact: Users cannot access the Positions Gallery (527+ positions) - a core feature of the app.

Additional Issue: The Terms of Service checkbox shows a loading spinner for several seconds before becoming checkable, indicating a slow async operation.

High Priority Bugs (P1)

3. NSFW Routes Return 404 Without VITE_DISTRIBUTION_CHANNEL

Severity: HIGH

Routes Affected: `/nsfw`, `/nsfw/topics`, `/videos`, `/analytics`, `/advanced`

Description: NSFW-related routes return 404 errors unless `VITE_DISTRIBUTION_CHANNEL=direct` is set in the environment configuration.

Root Cause: Routes are conditionally rendered based on `BUILD_ALLOW_DIRECT_ROUTES` flag which requires `VITE_DISTRIBUTION_CHANNEL === "direct"`.

Impact: Default installation shows broken NSFW navigation.

Recommendation: Document required environment variables or provide fallback behavior.

4. Health Tab Returns 404 Within Progress Page

Severity: HIGH

Route: Progress page → Health tab

Description: Clicking the “Health” tab within the Progress page (`/app?tab=diary`) results in a 404 error.

Steps to Reproduce:

1. Navigate to `/app?tab=diary`
2. Click on “Health” tab in the tab bar
3. **Result:** 404 Page not found

Impact: Health monitoring features are inaccessible from the Progress page.

5. Achievement System Stuck in Loading State

Severity: HIGH

Route: `/app?tab=profile` → Achievements tab

Description: The Achievements tab shows an infinite loading spinner and never displays achievement badges.

Steps to Reproduce:

1. Navigate to `/app?tab=profile`
2. Click on “Achievements” tab
3. **Result:** Loading spinner displays indefinitely

Impact: Users cannot view their achievements or progress toward badges.

6. Session Persistence Issues

Severity: HIGH

Description: After successful sign-in, navigating to `/app` shows “Signed out” status. The authentication session does not persist across page navigation.

Steps to Reproduce:

1. Navigate to `/auth`
2. Sign in with valid credentials
3. See success message “Signed in successfully”
4. Navigate to `/app`
5. **Result:** User appears signed out

Impact: Users cannot maintain authenticated sessions.

Medium Priority Bugs (P2)

7. 🟡 Routing Inconsistency for Health Diary

Severity: MEDIUM

Route: `/app?tab=health-diary`

Description: Direct navigation to `/app?tab=health-diary` sometimes returns 404, but clicking “Health Diary” in the sidebar works correctly.

Impact: Deep links to health diary may fail.

8. 🟡 Partner Sync Feature Mislabeled

Severity: MEDIUM

Description: The “Partner Sync” sidebar item navigates to Video Capture & Recording page with a “Partner Sync” sub-tab for video recording sync, not the auto-connection feature between admin emails mentioned in requirements.

Impact: User confusion about Partner Sync functionality.

9. 🟡 Console Warnings and Errors

Severity: MEDIUM

Description: Multiple console warnings observed:

- `[WARN] Stripe publishable key not found` - Missing Stripe configuration
- `X-Frame-Options may only be set via an HTTP header` - Security header warning
- `Content Security Policy directive 'frame-ancestors' is ignored` - CSP warning
- `[WARN] Long task detected` - Multiple performance warnings

Impact: Potential security and performance issues.

Low Priority Issues (P3)

10. 🟢 Chrome Password Manager Interference

Severity: LOW

Description: Chrome password manager dropdown appears during form interactions, potentially interfering with automated testing.

Impact: Minor UX annoyance.

11. 🟢 Email Pre-fill Behavior

Severity: LOW

Description: Auth forms pre-fill with previously used email addresses, which may confuse users.

Impact: Minor UX consideration.

Test Case Results

TC1: Authentication Flow

Test	Status	Notes
Sign Up with new email	✓ Pass	Account created successfully
Password strength validation	✓ Pass	Weak passwords rejected
Duplicate email detection	✓ Pass	“Email already registered” shown
Forgot Password flow	✓ Pass	Reset email sent
Sign In	⚠ Partial	Signs in but session doesn’t persist
Admin email bypass	✗ Not Tested	Cannot test without valid admin password

TC2: NSFW Navigation

Route	Status	Notes
/nsfw	✓ Pass*	Works with VITE_DISTRIBUTION_CHANNEL=direct
/nsfw/topics	✗ Fail	404 even with env config
/videos	✓ Pass*	Works with env config, shows DLC gate
/analytics	✓ Pass*	Works with env config, shows DLC gate
/advanced	✓ Pass*	Works with env config, shows DLC gate
/community	✓ Pass	Community Forum loads correctly

*Requires `VITE_DISTRIBUTION_CHANNEL=direct` in `.env`

TC3: Positions Gallery

Test	Status	Notes
Route accessible	✓ Pass	/positions loads
Age verification modal	✓ Pass	Modal displays correctly
Age selection	✓ Pass	Dropdown works
Consent checkboxes	⚠ Partial	Loading spinner on ToS checkbox
Verification completion	✗ Fail	Verification doesn't persist
527 positions display	✗ Blocked	Cannot access due to verification bug

TC4: Partner Sync

Test	Status	Notes
Partner Sync page	⚠ Partial	Shows Video Recording Partner Sync
Auto-connection feature	✗ Not Tested	Feature is premium-gated
Partner linking	✗ Not Tested	Requires premium subscription

TC5: Admin Dashboard

Test	Status	Notes
Access without auth	✗ CRITICAL	Dashboard fully accessible
User Management	✓ Pass	UI works, shows loading state
DLC Packages	✓ Pass	Shows 9 packages with mock data
Licenses	✓ Pass	Shows 342 licenses
Analytics	✓ Pass	Shows analytics UI
Notifications	✓ Pass	Compose and history work
Database	✓ Pass	Shows tables and stats
Security	✓ Pass	Shows audit logs UI

TC6: Achievement System

Test	Status	Notes
Achievements tab	✗ Fail	Infinite loading spinner
Badge display	✗ Blocked	Cannot test
Progress tracking	✗ Blocked	Cannot test

TC7: Health Features

Test	Status	Notes
Health Diary	⚠ Partial	Works via sidebar, 404 via direct URL
Health tab	✗ Fail	404 error
Medication tracking	✗ Not Tested	Cannot access
Symptom journal	✗ Not Tested	Cannot access
Predictive modeling	✗ Not Tested	Cannot access

TC8: Dashboard Customization

Test	Status	Notes
Settings page	✓ Pass	Loads correctly
Performance modes	✓ Pass	3 modes available
Theme toggle	✓ Pass	Light/Dark works
Theme presets	✓ Pass	10+ themes available
Theme switching	✓ Pass	Themes apply correctly

TC9: Notification Center

Test	Status	Notes
Admin notifications	✓ Pass	Compose and history work
Notification stats	✓ Pass	Shows sent, scheduled, read rates
Push/Email/In-App toggles	✓ Pass	All toggles functional

TC10: General UI/UX

Test	Status	Notes
Landing page	✓ Pass	Loads correctly
Navigation	✓ Pass	Sidebar and header work
Terms of Service	✓ Pass	/terms loads
Privacy Policy	✓ Pass	/privacy loads
DLC Store	✓ Pass	/store loads with packages
404 handling	✓ Pass	Custom 404 page
Console errors	⚠ Partial	Multiple warnings present

Environment Configuration Required

The following environment variables must be set for full functionality:

```
VITE_SUPABASE_URL=https://thajylrvfzjmerqqkmjv.supabase.co
VITE_SUPABASE_PUBLISHABLE_KEY=[valid_anon_key]
VITE_ADMIN_SUPER_EMAIL=n8ter8@gmail.com
VITE_ADMIN_EMAIL=slkchick_360@yahoo.com
VITE_DISTRIBUTION_CHANNEL=direct
```

Recommendations

Immediate Actions (P0)

1. **Implement Admin Authentication Gate** - Add authentication check to all `/admin/*` routes
2. **Fix Age Verification Persistence** - Debug why verification state doesn't persist after completion
3. **Add Session Persistence** - Ensure auth sessions survive page navigation

Short-term Actions (P1)

1. **Fix Health Tab Routing** - Resolve 404 error on Health tab
2. **Fix Achievement Loading** - Debug infinite loading state
3. **Document Environment Requirements** - Add clear documentation for required env vars

Medium-term Actions (P2)

1. **Improve Error Handling** - Add user-friendly error messages for failed operations
2. **Address Console Warnings** - Configure Stripe, fix CSP issues
3. **Optimize Performance** - Address "Long task detected" warnings

Test Environment Details

- **Browser:** Google Chrome 144
- **OS:** Linux (Ubuntu)
- **Screen Resolution:** 1024x768
- **Dev Server:** Vite v7.2.6
- **Backend:** Supabase (thajylrvfzjmerqqkmjv.supabase.co)

Appendix: Verified Working Features

1.  Landing page with feature showcase
2.  Sign up flow with email/password
3.  Password reset email sending
4.  DLC Store with packages and bundles
5.  Theme customization (10+ themes)
6.  Performance mode settings
7.  Terms of Service page
8.  Privacy Policy page
9.  Community Forum UI

- 10. ☒ Admin Dashboard UI (security issue aside)
 - 11. ☒ Admin Notification Center
 - 12. ☒ NSFW Hub (with env config)
 - 13. ☒ Medical Disclaimer modal
 - 14. ☒ Onboarding tutorial
